wav and .aiff files. The Sound Canvas VA can be used as a plug-in for other applications in case they don't support FLAC audio files. A chime designer also comes with Flume and the program is designed for the 'Creator' edition of Ableton Live. On the other hand, Live 9 requires a version of Flume called 'Flume X' for the same purpose. The tool was integrated into Ableton Live's 'Live' 9 in May 2012. Features Ableton's Sound Canvas VA is an audio instrument with a set of waveforms, a mixer, and more. They can be used in almost any context to create powerful sounds. It has a few features in common with some of the other software instruments from the company. The audio output of Sound Canvas VA is routed to the 'out' channel (input) of any audio device that supports multiple inputs. The audio inputs are from the left and right channels of the selected waveform, each containing four stereo tracks. For some sounds, there is a fifth channel in the middle that is not for the main input. This is usually the low pass filter, which typically only contains a single band. For some sounds, the signal is routed to a master, and various tweaks can be made to create additional effects such as reverb, delay, high pass and more. Sound Canvas VA's mixer is for adjustment of the signal levels of the different parts of the signal chain. It is often used to tweak a sound until it has the desired sound and volume. In the case of Audio Units, a lot of the parameters are hidden behind view options or are only available through the graphic interface. Sound Canvas VA can be saved as a WAV or AIFF file, and can be played back in any music app that supports audio formats. Version history See also References External links Sound Canvas VA – Ableton.
